

Doosan makes the grade at Tompsett Burgess Growers

Robust and reliable forklifts

Tompsett Burgess Growers has been farming, processing and storing carrots, parsnips and onions for over 50 years at Whitehall Farm near Ely, Cambridgeshire. With around 1050 acres of prime fen land, the family business produces over 75,000 tonnes of carrots and 9000 tonnes of parsnips a year, and with a late crop of carrots grown in Tayside, Scotland, Tompsett Burgess Growers is able to supply washed, graded and processed carrots to UK and European markets 52 weeks a year.

Moving heavy boxes of produce between processes, loading lorries and stacking boxes laden with root crops is punishing work that demands a fleet of robust and reliable forklift trucks. And working long hours throughout the year – inside and out, in all weathers – places a heavy onus on the fleet’s ability to perform undertough conditions. Ensuring consistent throughput on site and smooth loading of vehicles is absolutely essential to the efficient running of the business.

Doosan is the standard

An on-going strategy for many years at Tompsett Burgess Growers has been to standardise the fleet on Doosan counterbalance trucks. So when it came to replacing one of its three hardworking Doosan trucks the business chose to replace it with one of Doosan’s latest 3500 kg capacity

“We asked for a fourth lever to be fitted, so that we could use the new truck with our roll-over attachment.”

G35C-7 series gas powered counterbalance forklift trucks, complete with 3-stage free-lift mast.

Dan Regan, Plant Manager at Tompsett Burgess Growers, explains the importance of sourcing from one supplier of materials handling equipment. “We keep with the one supplier of forklift trucks as the Doosan trucks are tough and reliable and get the job done. It’s also convenient and straightforward when it comes to short-term hire, as we hire two extra trucks for handling onions from the middle of August to the middle of October, as well as at other peak times. It makes the paperwork very simple,” he says. tipping root crops into trailers.” White tyres were also fitted for clean working in the carrot washing facility.

Summing up the overall on-site performance of the new Doosan G35C-7, Dan Regan says: “it performs well, it’s reliable and importantly, it’s comfortable to drive.”

Safety and comfort are key

The new feature-rich Doosan 7 series truck came complete with integral side-shift as standard, along with LED lights for operating outside on dark winter afternoons, white noise reverse alarm for added safety and Doosan’s industry-leading sealed and oil-cooled disc brakes for reliable braking performance. Further design features included were large drive wheels, a heavy-duty steer axle and the strongest chassis available in the market place.

Safety and driver comfort were key considerations for the business. Clear all-round visibility, Doosan’s proprietary Operator Safety System and a rear grab-handle as standard offered the intrinsic safety

standards Tompsett Burgess Growers was looking for, and the fully adjustable suspension seat, ergonomic cab layout and simple controls provided the driver comfort needed for long shifts. to lift and manoeuvre our machines whenever we need to, is a real benefit to our business.

Being a gas truck, the G35C-7 also came with Doosan’s award winning, swing-down gas bottle handling device for effortless and safe bottle changing.

Use of special roll-over attachment

On site at Tompsett Burgess Growers the new Doosan G35C-7 is primarily designated to duties in the onion store as it has a 3-stage free-lift mast well suited to stacking heavy boxes of onions up to 6m high. But it is equally well equipped for yard work loading lorries or for operating inside the factory where carrots are washed and graded.

“Although, principally, a standard vehicle there was one extra item we needed on the new truck,” says Dan Regan. “We asked for a fourth lever to be fitted, so that we could use the new truck with our roll-over attachment, used in loading hoppers for bag-filling or tipping root crops into trailers.” White tyres were also fitted for clean working in the carrot washing facility.
